With you every step of the way – before, during and after pregnancy.

This project was funded in whole or in part by the U.S. Department of Health and Human Services, Health Resources and Services Administration, under Grant No. H5MMC20275.
If You are Pregnant and Drinking, QUIT NOW

If you are pregnant and drinking alcohol, you can still help your unborn baby if you stop drinking now. The more alcohol you drink while you are pregnant, the more likely your baby is to be born with FASD.

If you need help to stop drinking, talk to your health care provider. To find a substance abuse treatment facility in your area, visit www.findtreatment.samhsa.gov or call the SAMHSA Substance Abuse Treatment Referral Helpline at:
- 1-800-662-HELP (4357)
- 1-800-662-9832 (Español)
- 1-800-228-0427 (TDD)

For more helpful resources and information, visit www.hmhb-hawaii.org. You can click through a variety of information in over 20 different categories to help you with questions for before, during and after pregnancy. Or you can go to The Directory on our website to search for resources by keyword, island and category!

If you are pregnant or think you may become pregnant soon, DO NOT DRINK ALCOHOL.

Drinking ALCOHOL at ANY TIME while you are PREGNANT can HURT YOUR BABY.

How can alcohol hurt my baby?
Drinking alcohol while you are pregnant can harm your unborn baby by causing Fetal Alcohol Spectrum Disorders (FASD). FASD include brain damage, vision and hearing problems, slow growth, heart problems and birth defects such as deformed or stunted bones.

What can I do to protect my baby from FASD?
While there is no cure for FASD, it is 100 percent preventable if you don’t drink alcohol while you are pregnant. There is no known safe amount of alcohol to drink while you are pregnant, and there is no safe time to drink if you are pregnant. All types of alcohol can harm your baby — even wine, wine coolers and beer.
